

# Endurance BioBarrier Mold Prevention Spray

Longest Lasting Protection Against Mold, Mildew, Germs, Musty Odors, Dry Rot

Guaranteed Protection / Non-Toxic / Zero VOCs / Water-Based Formula

6 mos: Bathrooms + more    2 yrs: Indoor/Outdoor    5 yrs: HVAC ducts    25 yrs: Enclosed surfaces

## Application Instructions for All Indoor and Outdoor Surfaces

[www.GuaranteedMoldPrevention.com/how-where-to-apply](http://www.GuaranteedMoldPrevention.com/how-where-to-apply)

1. If applicable, fix any leaking or standing water problems.
2. Ensure that surface is clean.
  - We recommend using our non-toxic Endurance BioBarrier Mold & Grime Cleaner Prep.
3. If it's a mold remediation/restoration project, be sure to follow IICRC S520 or similar guidelines.
  - Before applying our Mold Prevention Spray, please check with your Industrial Hygienist as to whether it should be applied before or after testing.
4. If possible, allow surface to fully dry after cleaning.
  - However, our Mold Prevention Spray can be applied to slightly damp surfaces if desired.
5. Stir thoroughly. Lightly apply Mold Prevention Spray using a fogger, airless sprayer with 411 tip, or hand pump sprayer with fine mist nozzle. Only need a 1 mil coating. Do NOT overspray. Do NOT wipe on.
  - If using an airless sprayer, set it to about 600-900 PSI and use a 411 tip.
  - If a pool of product forms, gently dab it up using a cloth or sponge. Dab, but do not wipe up.
  - If spraying in a crawlspace, ensure you have negative air venting outside and adequate lighting.
6. Our Mold Prevention Spray creates an invisible microscopic barrier when dry. However, you can use a UV black light to double check whether your crew properly coated all target surfaces.
  - Properly coated surfaces will glow under the UV black light.
  - Did your crew miss an area? If so, it won't glow. Just lightly spray that overlooked area.
  - Using a UV black light is a helpful way to ensure a quality application job and satisfied clients.
7. Allow treated surfaces to air dry for at least one hour. Do NOT wipe dry.
8. Since it is safe for all surfaces, don't worry if you lightly fog or spray areas adjacent to your target surface.
  - This is an added benefit because those surfaces (including carpets and fabrics) will now have long lasting protection against mold, mildew, germs and musty odors.
9. Since our Mold Prevention Spray is non-toxic, non-corrosive and has zero VOCs, it is perfectly safe to use on all interior or exterior surfaces, including textiles. Safe for people, pets, plants and the environment.
  - However, to be safe, don't use on food preparation surfaces or bedroom pillows.
10. Even though our Mold Prevention Spray is non-toxic and has zero VOCs, we recommend using appropriate Personal Protective Equipment.
  - For example, in typical applications we recommend a coverall suit, respirator mask, protective goggles and rubber gloves while applying our Mold Prevention Spray.
11. To prevent clogging, be sure to use fresh water to flush out the fogger or sprayer and its nozzle.
